Hiring team, Sample Labs

**Subject:** Calm releases and observable services for your platform team

Dear hiring team,

Your posting asks for someone who can make releases boring and incidents rare. That is the work I have done for the last three years at Example Corp, where I designed the deployment pipeline every product team now uses.

You list observability, PostgreSQL and on call experience. I built the metrics stack at my previous company, moved the billing services to managed Postgres, and ran the reviews after each outage, turning every finding into a tracked change.

I work in small steps that can be reviewed and rolled back, and I write the runbook before the incident rather than after it. I would rather name a gap plainly than round it up: I have used Kubernetes in production for two years, not more.

I live in Lyon, speak French and English, and can work from your office two days a week.

I would welcome a conversation about your platform roadmap.

Kind regards,

**Alex Example**
